

JAVASCRIPT TASKS LIST

Sr No.		
1	Task	Divisible by 5 Check
	Requirement	Create a function that returns true if a given number is divisible by 5; otherwise, it returns 5.
2	Task	String Type Check
	Requirement	Develop a function that checks if a given variable is a string. Return True if it is a string; otherwise, return False.
3	Task	Float Type Check
	Requirement	Design a function to verify if a variable is a float. It should return True for floats, and False otherwise.
4	Task	Minimum of Two Elements
	Requirement	Implement a function that finds and returns the smaller of two provided elements.
5	Task	Divisibility Rule
	Requirement	Write a function that returns True if the element is divisible by 2 and False; otherwise, apply the same logic for each element in the array.
6	Task	Find Unique Elements in an Array
	Requirement	Write a function that takes an array as input and returns a new array containing only the unique elements from the original array.

7	Task	Sort Array of Objects
	Requirement	Create a function to sort an array of objects based on a specific object key, like sorting employees by age or name.
8	Task	Filter Tasks by Date
	Requirement	Given an array of tasks with properties 'name' and 'due_date', write a function that filters and returns tasks that are due on a given date.
9	Task	Group Elements in Array
	Requirement	Implement a function that groups elements in an array based on a provided grouping criterion (like grouping numbers by odd and even).
10	Task	Calculate Age from Date of Birth
	Requirement	Develop a function that calculates the age of a person based on their date of birth provided in the format 'YYYY-MM-DD'.
11	Task	Basic Calculator with UI
	Requirement	Build a basic calculator with a user interface for addition, subtraction, multiplication, and division. It should have buttons for digits and operations, displaying the calculation as it progresses.
12	Task	Dynamic Form Validation
	Requirement	Create a form with fields such as name, email, and password, and validate the inputs in real-time. Show error messages if the inputs do not meet the specified criteria.
